INDIVIDUAL MANUFACTURING

**Your requirements - our challenges.
Together we will create your unique product range ...**

... with the quality and innovative power of SPECK Pumpen.
Our expertise - your individual product.

We have been developing pumps for every challenge for over 100 years. The result of our enthusiasm is convincing pump technologies and solutions that could also speak for your success.

With SPECK Pumpen you get the brand quality and everything that goes with it: innovative power, consistency and reliability. Tailor-made solutions, even for special challenges, reliability, durability and ease of maintenance, are recognised qualities of SPECK. Sustainability, energy efficiency and noise reduction are among the most important aspects of our development.

Our experience and our know-how are reflected in every single one of our pumps and in yours too, if you like! As an Original Equipment Manufacturer, we will develop your individual pump together with you. Challenge our flexibility!

Field of application

Our pumps are designed for swimming pool water circulation, thermal water, thermal brine, seawater aquariums with artificially treated salt water and a variety of problem media. You name your special field of application. Together we will examine it and check the components and concentrations in the intended media.

Construction

Monoblock type pumps can be designed with or without an integrated strainer tank. A unique feature of our design is that the motor or pump shaft does not come into contact with the pump media, providing complete electrical separation. We can supply our pumps in non-self-priming and self-priming designs. Furthermore, we are able to use alternative sealing variants such as magnetic coupling without rotating mechanical seals.

Materials used

What quality standards do you set for your products? We will implement your ideas in the production. Whether technically high-performance plastic, easily recyclable materials or particularly resistant materials - we have the overview and will advise you on all aspects.

Accessories

Your pumps are supplied with the suitable connection fittings, with various suction baskets or a lid with integrated opening device. We implement your extra special wishes. We are also flexible when it comes to accessories and can accommodate your ideas.

Motor

We install the motor that meets your expectations. Whether standard or variable speed drive so that you can operate your pump as energy efficiently as possible. Even if you place particular importance on the lowest possible noise levels, we will find the right solution!

Appearance

We can adapt both the product itself and its complete packaging to your corporate and brand identity. We will show you all the possibilities.

Certified safety

The safety of the pumps we build is a central issue. This also applies to OEM variants that we manufacture on your behalf. Your product will be manufactured by us according to important safety standards and can carry the GS symbol if you request!
