# BADU Eco Future

The unprecedented novelty on the swimming pool market "Made in Germany": With the BADU Eco Future, SPECK is launching to the market the first swimming pool pump made of bio-based plastic.

The BADU Eco Future combines innovation with design and maximum sustainability: technological top performance for pool enjoyment with a clear conscience.

## SAFE

Thanks to the proven safety – all electrical components are separated from the pool water to prevent electricity getting into the pool – the BADU Eco Future is certified with the GS mark\* from the German technical inspection association TÜV and guarantees safe swimming fun for the whole family.

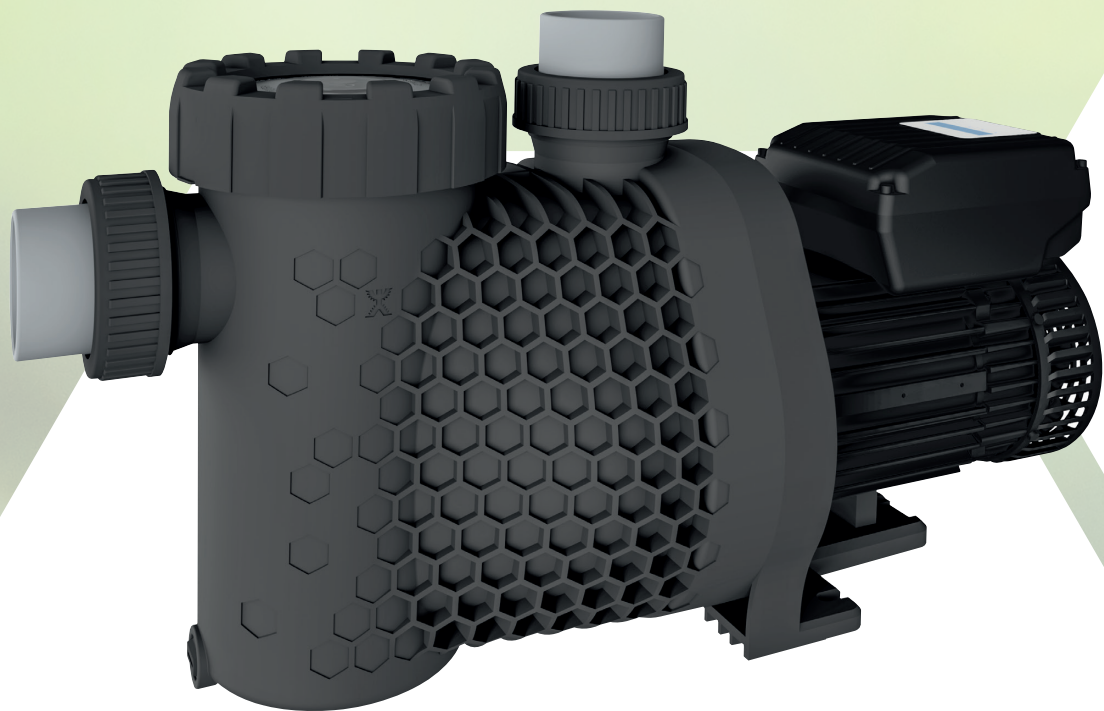

\*TÜV / GS certification marks applied for.

## EFFICIENT

The BADU Eco Future is driven by a powerful, extremely high-performance permanent magnet motor offering even better efficiency.

Combined with an intelligent control system, the speed of the BADU Eco Future can be controlled, making it easily adaptable to any operating mode. The individually adjustable power levels can be selected via an integrated display directly on the motor or via a digital input.

This minimises energy consumption and operating costs, ensures a long service life and the best results in terms of water quality.

## INNOVATIVE

Inspired by nature, the BADU Eco Future impresses with its innovative honeycomb structure giving the pump a unique look.

But the honeycomb structure of the BADU Eco Future is not only a highlight in terms of design, it also sets new standards in terms of strength, as compared with conventional surface structures, significantly less material is required for identical stability.

This not only saves resources and reduces the CO2 footprint, but the weight advantages also make the installation easier.

## SUSTAINABLE

With the BADU Eco Future, SPECK is launching to the market the first swimming pool pump made of bio-based plastic.

53 years after the market launch of the first corrosion-resistant pump for private swimming pools, SPECK is setting a new standard and a clear signal in terms of sustainability and climate protection.

## CONVENIENT

Hydraulically optimised and equipped with a patented impeller with corresponding fan guard, the BADU Eco Future is extremely smooth-running and very quiet.

LED illumination in the transparent lid ensures maximum operating convenience and serves for easy visual inspection.
