

# High-performance plastic multi pumps

Optimised efficiency and maximum stability  
even with aggressive media

# NORMBLOCK MULTI 80/200 & BADU BLOCK MULTI 80/200

With the new models Normblock Multi 80/200 and BADU Block Multi 80/200, SPECK extends its range of innovative completely plastic pumps for the public swimming pool sector and closes the gap between the two successful models 65/250 and 100/250.

The completely plastic concept of SPECK sets standards in the public swimming pool sector and adds new, innovative possibilities to the cast iron and bronze pumps used up to now.

## MODULAR

The 80/200 models are designed as a multifunctional modular system. It offers multiple combination options so that a total of 7 new models can be created with different standard flanges and the 80/200 models can also be configured for the US market.

This makes it easy to replace old cast-iron or bronze pumps, as the 80/200 models can be individually configured for the various connections and connection dimensions. Thanks to a new, innovative adapter solution, the BADU Block Multi series can also be flexibly adapted to existing pipelines.

## EFFICIENT

The corrosion resistance adds another positive effect for more efficiency of the pump: Since the surface does not change even over years, the performance remains constant over the service life, making it efficient and cost-saving.

## DURABLE

Made of high-performance plastic, the 80/200 models combine the well-proven technology of the Multi series with this corrosion-resistant material, thus significantly extending the service life of the pumps.

The new models help to protect swimming pools from rust ingress on the pump side – even after the pump hasn't been running for a long time. This is because the completely plastic pump designs are not only corrosion-resistant and already running successfully in brine water circuits with 18% salinity, they also offer significant weight and cost advantages.
