

# Solar panel BADU<sup>®</sup> BK 250

The BADU solar panels are available in two versions to make it easier to calculate the area required for optimal pool warmth: The BADU BK 250 and BADU BK 370 vary in size, weight and flow rate.

The choice depends on the conditions onsite such as the installation location and pool size. The general rule for existing pools is approximately 0.7 m<sup>2</sup> solar panel surface per square meter of the pool surface. Your swimming pool specialist retailer will plan the optimum solar panel unit for you!

Panels can be installed on all types of roofing, for example a garage roof - whether flat or ridged.

There is no better priced or more convenient way to heat your pool! The amortisation period for the BADU BK solar panels is less than three years. Your swimming pool specialist retailer can help you with the exact configuration.

## Details

Class: GREEN

Extras: Poolwassererwärmung

Pool equipment: Solar panels
