

SGM-Speckmat 201

The control unit switches the pump on when the pressure is less than 2.2 bar and turns the pump off when it reaches the end pressure, runs dry or when the consumption is less than 0.6 l/min. The starting pressure cannot be changed. There must be a minimum pressure difference of 0.7 bar between the starting and cut-out pressure.

The benefits:

- No pressure vessel necessary
- Simple installation
- No settings necessary
- Fully-automatic operation
- Compact construction
- Corrosion-free materials
- Non-return valve installed
- Protected against dry running

Scope of delivery:

Pump, control unit, cable with plug, cable connection between pump and flow control instrument for dry running protection.

Details

Flow rate Q in m³/h: max. 4

Motor performance in kW (P₂): 0,88

Total head H in m WS: max. 50

Field of application

Groundwater reduction

Miscellaneous

- > Sonderspannungen
- > Sondergleitringdichtungen
