

T-201 / T-401 / T-601

These submersible pumps with peripheral impellers are characterised by their high pressure and their sealless, low-maintenance construction. They can be applied in circuits with media not containing solid matter, for example in temperature control units or machine cooling systems.

Details

Connection: 230V, 400V

Flow rate Q in l/min: max. 60

Motor performance in kW (P2): 0,5

Total head H in m WS: max. 35
