

BADU[®] Eco Drive II frequency converter, 1.50 kW

There are various operating conditions in pool water treatment, for example filtering or backwashing. Several operating points have to be set at the pump for these operating conditions. This can be ensured conveniently by using a BADU Eco Drive II to control the individual operating points. In doing so the pump's motor speed is electronically adjusted as necessary. Due to the pump capacity, the BADU Eco Drive II is especially suitable for the BADU 90/25 - 48, BADU Resort and BADU 93. Further models on request.

Details

Class: GREEN

Installation: Built-in pool

Motor performance in kW (P2): 1,50
Pool equipment: Frequency converters
Pool type: Naturpool / Schwimmteich
