Centrifugal pump BADU® Bronze 30-AK-SSV

The special version AK pumps correspond to the standard versions in our BADU programme, however they are designed for use in diverse salt water and problem medias. Media that could potentially leak or minerals and salts which could crystallise do not come into contact with the motor or bearings. Therefore this ensures considerably longer operating times for these fields of application compared to the standard version.

Details

Class: PREMIUM
Connection: 230V, 400V
Flow rate Q in m³/h: max. 30
Motor performance in kW (P2): 1,5
Total head H in m WS: max. 185
